DETAILED ACTION

Terminal Disclaimer

1. The terminal disclaimer filed on 12/23/08 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of Pat. No. 6,675,877 has been reviewed and is accepted. The terminal disclaimer has been recorded.

Allowable Subject Matter

2. Claims 1-14, 16-22, 34-50, 52-53, 55-71, 73-75, and 77-89 are allowed.

3. The following is an examiner's statement of reasons for allowance: the apparatus of independent claim 1 defines over the prior art of record because the prior art does not teach, suggest, nor render obvious the rotor having an end member, a first annular member proximate the end member, a second annular member proximate the first annular member, and the inner cavity extending through the first and second annular members;

the apparatus of independent claim 82 defines over the prior art of record because the prior art does not teach, suggest, nor render obvious the rotor having an end cap, a first annular member proximate the end cap, a second annular member proximate the first annular member, and the first annular member resting on the support bearing;

the apparatus of independent claim 85 defines over the prior art of record because the prior art does not teach, suggest, nor render obvious the cylindrical member being corrugated and defining a plurality of channels for food flow;

the apparatus of independent claim 87 defines over the prior art of record because the prior art does not teach, suggest, nor render obvious the rotor having an end member, a first annular member proximate the end member, a second annular member proximate the first annular member, and the cylindrical member placed around the second annular member;

the apparatus of independent claim 89 defines over the prior art of record because the prior art does not teach, suggest, nor render obvious the rotor having a generally conical end member, a first annular member proximate the end member, a second annular member proximate the first annular member, a third annular member proximate the second annular member, and the inner cavity extending through the first, second, and third annular members;

the apparatus of independent claim 50 defines over the prior art of record because the prior art does not teach, suggest, nor render obvious a corrugated member surrounding the rotor wherein the food product passes between the inner surface of the corrugated member and an outer surface of the rotor;

the method of independent claim 70 defines over the prior art of record because the prior art does not teach, suggest, nor render obvious the rotor having a generally conical end member, a first annular member proximate the end member, a second annular member proximate the first annular member, a third annular member proximate

the second annular member, and the inner cavity extending through the first, second, and third annular members

the method of independent claim 59 defines over the prior art of record because the prior art does not teach, suggest, nor render obvious expelling the food product through an aperture defined between a top surface of the rotor and an interior surface of a corrugated enclosure surrounding a portion of the rotor.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Case et al [Pat. No. 6,606,922], Dyer et al [Pat. No. 6,236,934], Dyer et al [Pat. No. 5,757,662], and Hildebrand et al [US 2006/0005623] teach devices for balancing shafts with electromagnets.
